Reliable Data – What Would You Do without It?

Your data is more than a bunch of ones and zeros. It's the heart and soul of your business. Keeping it alive and constantly accessible isn't just a question of convenience – it's a question of survival. Over the years, as data has grown, storage needs have exploded. And with them, so has the risk of disaster.

Downtime is costly, and permanent data loss can be fatal. More than ever, you need to arm yourself with the most effective disaster recovery and data protection solutions possible. Unfortunately, most industry solutions are geared towards large enterprises, which can mean multiple licenses, complex management and heavy costs.

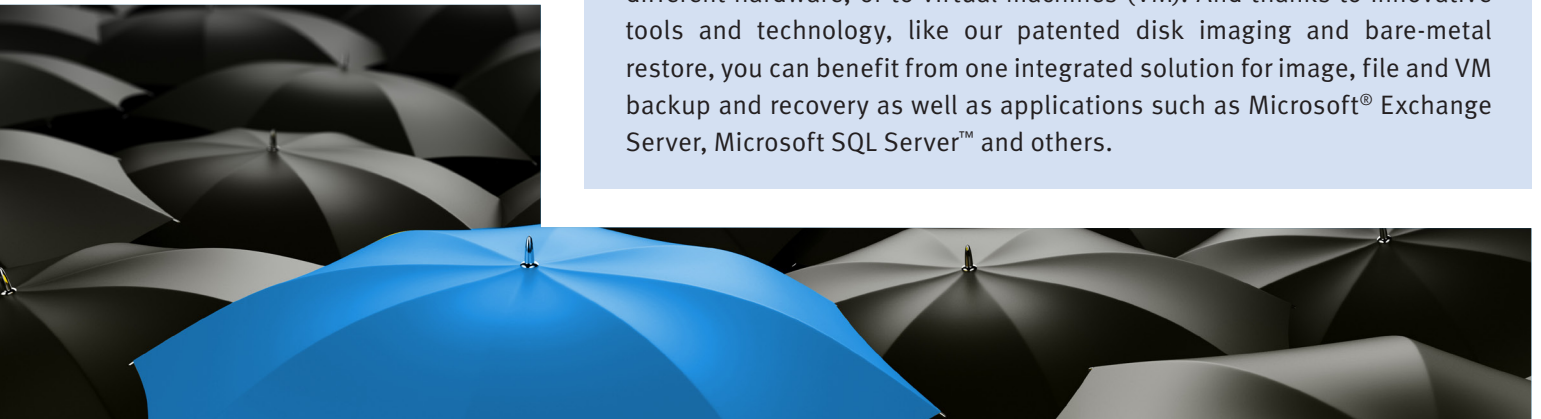

But what about small and mid-sized businesses? Who's looking out for you? Who's creating affordable, reliable and ultra-simple solutions that fit your needs? Who's able to guide you to evolving environments like virtualisation and the cloud? Who's backing up your success?

We are. And we're already doing it for 175,000 corporate customers worldwide.

You Don't Have to Be Big to Get the Best!

Everything we do is centered on the needs of small and mid-sized businesses like yours. The solutions we develop are affordable, flexible and intuitive. And, unlike our big-name competitors, all of our hard work and investment is dedicated solely to disaster recovery and data protection. Serving you is our reason to exist.

When disaster strikes, you can count on Acronis® for fast and reliable recovery of your servers, workstations or laptops to the same hardware, to different hardware, or to virtual machines (VM). And thanks to innovative tools and technology, like our patented disk imaging and bare-metal restore, you can benefit from one integrated solution for image, file and VM backup and recovery as well as applications such as Microsoft® Exchange Server, Microsoft SQL Server™ and others.

Maybe you need to tame data growth through optional deduplication. Maybe your backup strategy and policies will change over time. Maybe you'll want to start migrating to virtual machines; or add an extra layer of data protection through cloud-based backup. All this is possible with Acronis Backup & Recovery 11. Regardless of which change happens in your organisation or when it happens, Acronis will accompany you along the way with its integrated, easy-to-use software from one central solution.

What's special about Acronis Backup & Recovery 11 is that it's built on a unified platform through which all features, applications and modules share a common code from our proven and widely used disk imaging engine, invented and developed by Acronis since 2002. As a result, you get full support for physical and virtual environments as well as diverse hardware and operating systems – all in one unified solution.

► Great Value at a Low Cost

By offering you advanced capabilities at an affordable price, Acronis Backup & Recovery 11 helps you maximize uptime while achieving a low Total Cost of Ownership (TCO). There's no need to burden your budget with various vendors and licenses or multiple maintenance contracts. One solution for all your disaster recovery and data protection needs is all you require.

What's more, the efficiency of the features themselves brings you significant savings in time and money. For example, Acronis' deduplication option can cut as much as 90% of your data storage requirements while reducing network bandwidth usage. When you put it all together, Acronis Backup & Recovery 11 offers you a rapid Return on Investment (ROI), paying for itself quickly while providing you with protection, availability and peace of mind.

NEW!

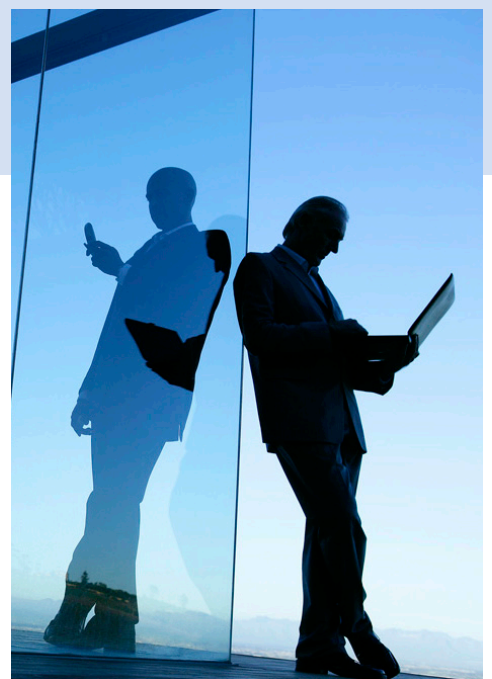

Disaster Recovery or Data Protection – Why Choose Only One?

Acronis Now Gives You the Best of Both Worlds!

System-Centric Approach: Disaster Recovery restores all your data, files, applications and operating systems, leveraging disk imaging technology, to where they were at a specific point in time – all at once – literally bringing your operations and infrastructure back to life in minutes.

Data-Centric Approach: Data Protection is a data centric approach that allows you to safeguard, recover, manage and search for individual files from a backup no matter where they're located in the backup file archive.

Both have their benefits. But, traditionally, businesses have had to acquire, manage and maintain separate products. Not anymore. With Acronis Backup & Recovery 11, both capabilities are fully integrated into one solution.

One Powerful Solution for Every Type of Need!

Whether you need an affordable standalone solution for local servers or workstations, or advanced capabilities for centralised management, Acronis Backup & Recovery 11 is the right choice.
