

MicroMain

Maintenance Management

MicroMain gives you the tools you need to streamline maintenance operations, maximize productivity and reduce costs.

Available as a computerized maintenance management system (CMMS) or enterprise asset management (EAM) system, the software gives you the features you want for work orders, preventive maintenance, asset management, inventory, purchase orders, and reports. Yet MicroMain™ Maintenance Management is easy to learn and simple to use.

We believe in giving you control. So you can:

- Use complete work orders or simplified quick tickets
- Show tabs or hide them
- Set the alerts you want
- Send work orders via email, printers, or handhelds
- Use wireless or cradle for mobile devices
- Automatically populate routine work orders with shop, priority, time allotted
- Create your own reports
- Use the system in the way that makes the most sense for you

MicroMain makes its software available "open." This unprecedented offering gives you complete solution control and flexibility. By having access to the source code, you have the option to use your own staff or third-party programmers to customize core functionality to suit your needs.

Get More Done in Less Time

- Use automatic alerts for critical tasks
- Send work orders via email, printer, Pocket PCs or smart phones
- Add labor, parts and tools to work orders
- Use projects
- Schedule PMs with easy calendar control
- Use filters for reports
- Automatically populate info for your services
- Memorize and recall standard tasks
- Auto-add parts to purchase orders when inventory is low
- Use color-coded visual work order scheduling

Track Costs

- Analyze labor productivity
- Track total cost of ownership for all assets
- Compare budgets by shop
- See time and costs by shop and failure
- View costs by maintenance category
- Assign contract costs to accounts or assets
- Identify highest maintenance costs

Show Results

- Track equipment downtime
- Manage suppliers, vendors, and contractors
- Show safety, lockout/tagout, inspection or other flags
- Create corrective work orders from failed inspection points
- Manage warranties
- Track the status of purchase orders
- Increase parts availability
- Easily track open and completed work orders
- Use reports to show compliance

MicroMain makes it easy to save time and money. Use barcode scanners for physical inventory counts, automatically notify key staff when work requests are submitted via the web, and increase efficiency with timesheets.

You can also improve security by keeping track of all of your keys. Improve response time by making sure tools are available where and when they are needed. Increase accuracy by uploading work order and labor time data from your technicians' Pocket PC devices.
